

Foster Care Association Victoria Carer Survey 2024 Report

25 June 2024

We pay respect to First Nations peoples past and present, their cultures and traditions and acknowledge their continuing connection to Land, Sea and Community.

Background and Objective

Foster Care Association Victoria (FCAV) is the peak body for Victorian foster carers. This research, commissioned by FCAV, aims to **gather insights into the experiences of Victorian foster carers** to inform advocacy, engagement, policy and service development.

Methodology

The quantitative research consisted of a voluntary **online survey of current and former Victorian foster carers** drawn from an FCAV member database. Prior to the commencement of fieldwork, primary approach letters were sent to all FCAV members, providing background to the project, key dates, information about privacy and confidentiality, and an opt-out process for those who did not wish to be involved in the process. **Unique links** to the survey were distributed by ORIMA Research with **n=754** providing at least one response beyond screening questions. Fieldwork was conducted from **March 15th to April 28th, 2024**.

Overview of research phases:

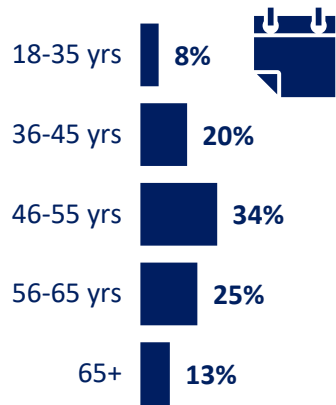

Respondent demographic profile

1% other/ prefer not to say

Gender of co-carers

Of the respondents who cared in partnership with someone else, the gender breakdown of the other person was:

31%
Female

67%
Male

2% other/ prefer not to say

Understanding the carer experience

Foster carer experience

Overall, how have you found your experience as a foster carer? % Good/
Very Good

Among current carers who have had a good/very good experience as a foster carer:

- 79% plan to **continue** foster caring;
- 8% plan to change to provide a **long-term or permanent care** arrangement;
- 5% plan to take a **temporary break** from foster caring;
- 1% plan to **stop foster caring**; and
- 7% were **not sure** what they'll do in the next 12 months.

Future intention of current carers

Over the next 12 months, which of the following are you most likely to do?

Motivation to be a foster carer

Has your motivation to be a foster carer changed over time?

45% of current carers planning to **stop or unsure of their future** foster caring reported that their **motivation had changed**.

In comparison:

- 39%** planning to change to provide a **long-term or permanent care** arrangement reported that their motivation had changed;
- 18%** planning to take a **temporary break** from foster caring reported that their motivation had changed; and
- 23%** of current carers planning to **continue** foster caring reported that their motivation had changed

Carers who had been caring for a **year or longer** reported having a **greater change in motivation** (37%), compared to those who have been caring for less than a year (18%).

Rewarding aspects of being a foster carer

Most rewarding aspects of being a foster carer

		Current Carers (n=490)	Carers on Break (n=71)	Former carers (n=100)
Seeing positive change and growth in the child/ young person	86%	87%	86%	82%
Positive impact on relationships (e.g. family, social)	30%	31%	27%	28%
Contributing to the community	30%	28%	38%	36%
Being a role model	28%	30%	28%	21%
Prospect of providing a longer-term home	28%	29%	14% ↓	32%
Supporting the child/ young person to reunify with their family	27%	25%	31%	33%
Developing new/ different parenting skills and capabilities	23%	24%	27%	12%
Other	4%	4%	6%	3%
I have experienced no benefits from being a foster carer	<1%	0%	0%	2%

Most rewarding aspects of being a foster carer – subgroup differences

Prospect of providing long term home

More likely to be reported as one of the most rewarding aspects:

- Among current carers who plan on changing to provide a **long-term or permanent care** arrangement in the next 12 months (63%, compared to 26% of those planning to continue caring and 10% of those planning to take a break);
- As **carer duration increases** (34% among those who have been a carer for 6 years or more, compared to 10% among those caring for less than a year, and 24% among those caring for 1 to 5 years); and
- Carers in the **outer regional area** (46%, compared to 29% in an inner regional area, and 26% in a metropolitan area).

Other subgroup differences:

By gender

- **Females** were more likely to find **supporting the child/young person to reunify with family** (30%) as one of the most rewarding aspects, compared to males (12%).

By educational attainment

- **Post-graduates** were more likely to find **contributing to the community most rewarding** (42%), less likely to find the prospect of **providing a longer-term home** most rewarding (18%).

By location

- Carers residing in **metropolitan areas** (36%) were more likely to report that **contributing to the community** was one of the most rewarding aspects, particularly compared to those in outer regional areas (6%).

Challenges of being a foster carer – overall

Most challenging aspects of being a foster carer (All respondents)

Challenges of being a foster carer – overall

Most challenging aspects of being a foster carer (All respondents)

Challenges of being a foster carer – Current carers

Most challenging aspects of being a foster carer (Current carers)

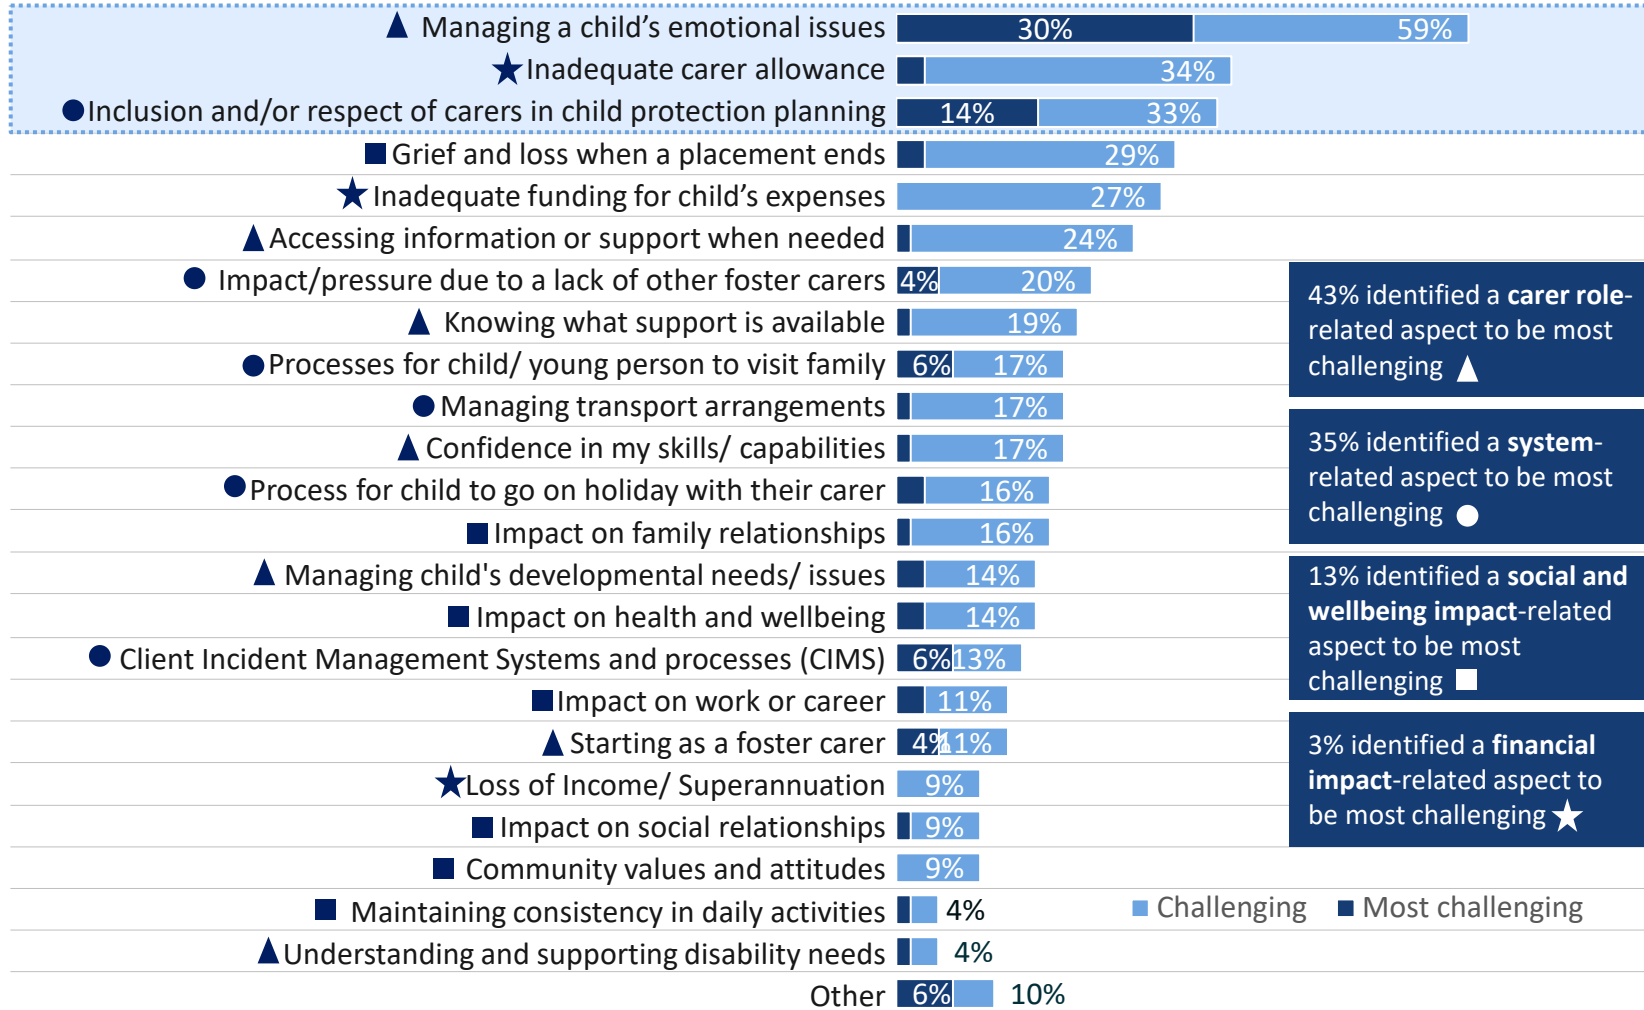

Challenges of being a foster carer – Current carers

Most challenging aspects of being a foster carer (Current carers)

Challenges of being a foster carer – Carers on a temporary break

Most challenging aspects of being a foster carer (Carers on a temporary break)

43% identified a **carer role-related** aspect to be most challenging ▲

35% identified a **system-related** aspect to be most challenging ●

13% identified a **social and wellbeing impact-related** aspect to be most challenging ■

3% identified a **financial impact-related** aspect to be most challenging ★

I have experienced no challenges in being a foster carer

Challenges of being a foster carer – Carers on a temporary break

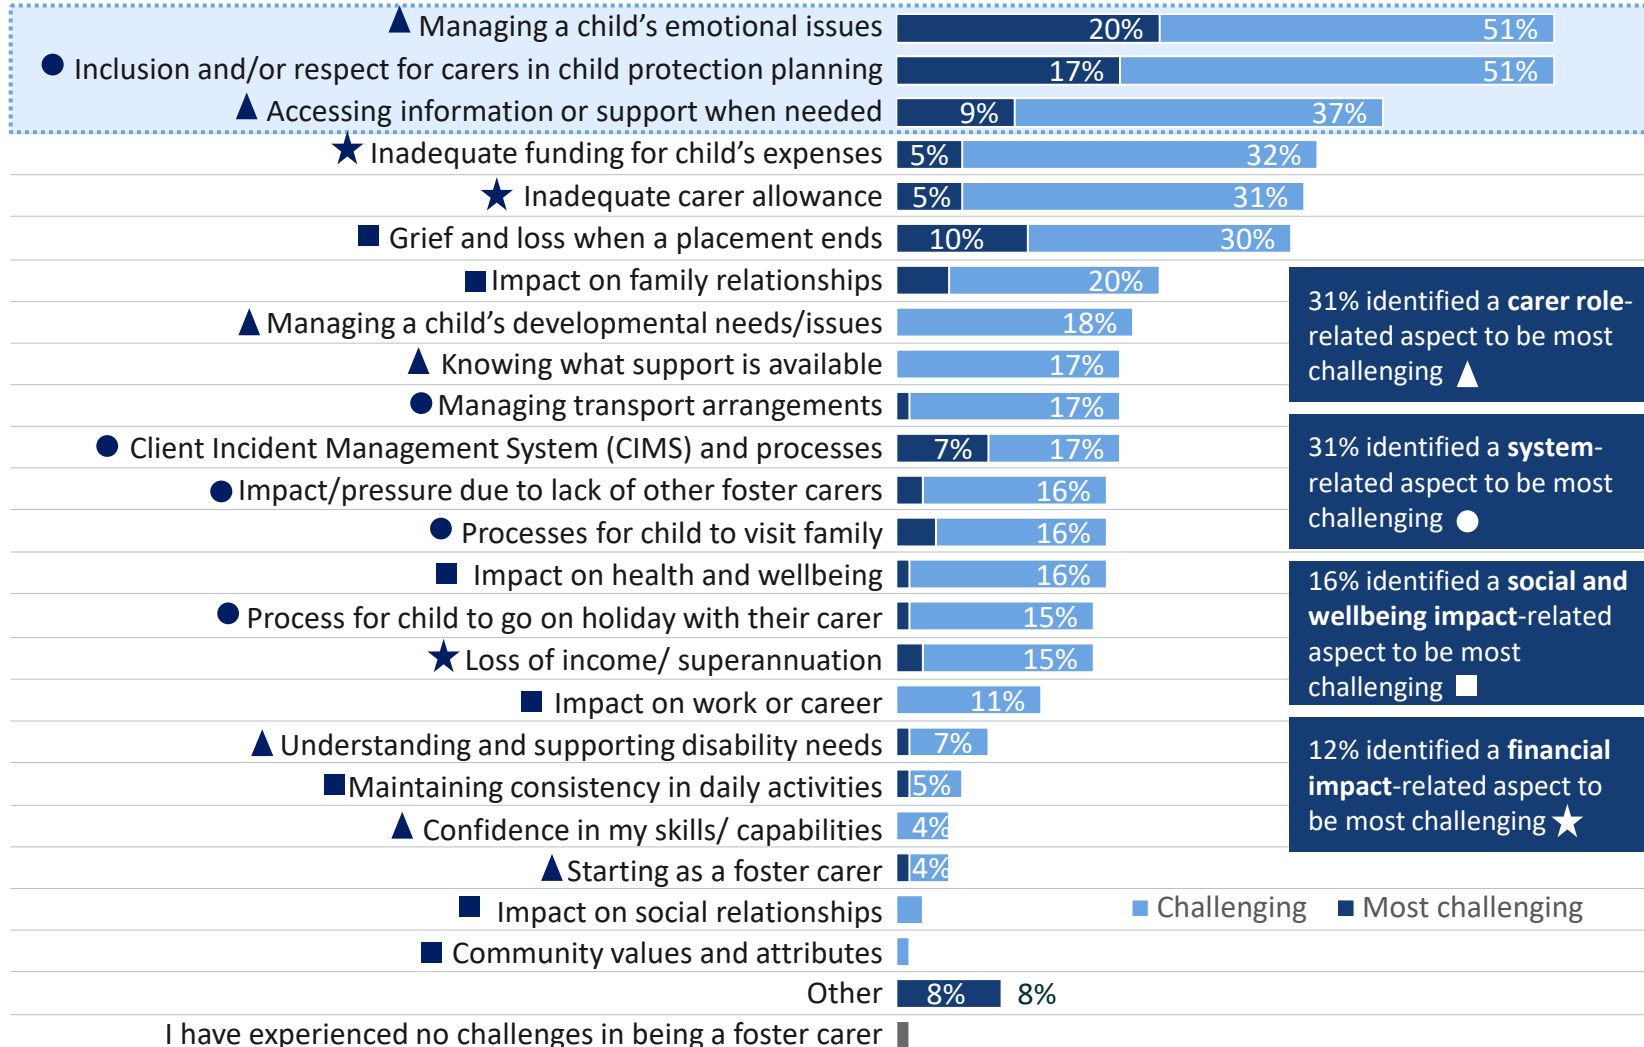

Most challenging aspects of being a foster carer (Carers on a temporary break)

I have experienced no challenges in being a foster carer

Challenges of being a foster carer – Former carers

Most challenging aspects of being a foster carer (Former carers)

Challenges of being a foster carer – Former carers

Most challenging aspects of being a foster carer (Former carers)

Financial concerns as most challenging

By gross annual household income

Of the respondents who found **financial concerns** to be the most challenging, their **gross annual incomes** were the following:

By employment status

Of the respondents who found **financial concerns** to be the most challenging, their **employment situations** were the following...

Most challenging aspects – subgroup differences

Overall

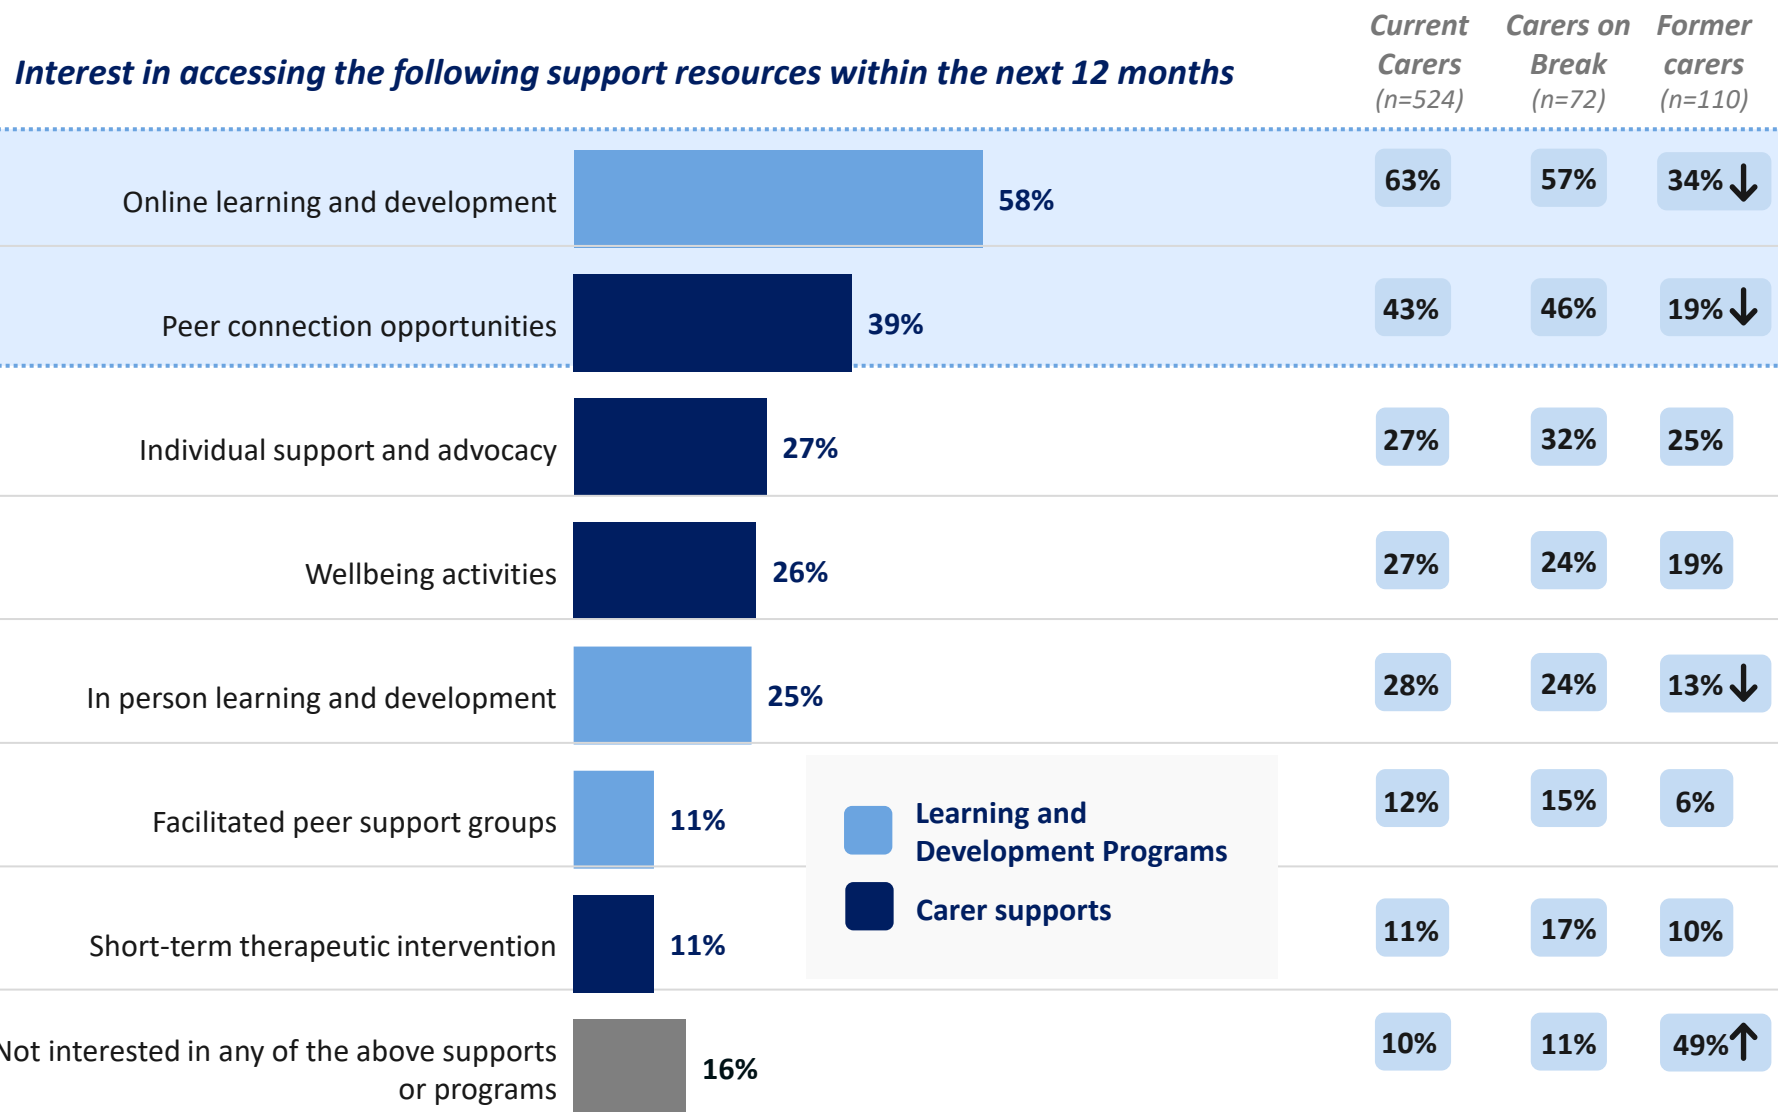

- ▲ Carers who had been caring for **1 year or less** (68%) and those who had **no children living in their home** for the week (40%) were more likely to identify a **carer role-related aspect** to be the most challenging, compared to those caring for more than a year (28%) and have one or more children in their household (24%).
- Carers who had been **foster caring alone** were significantly more likely to identify **social and wellbeing-related impacts** as one of the most challenging aspects (20%), compared to those who had been caring with another person (12%).

Current carers

- ★ **Current carers** were significantly more likely to identify **financial-related impacts** as the most challenging aspect (21%), compared to former foster carers (12%) and those taking a break (3%).
- ▲ Current carers who had **no children in foster care** living in their home for the week (40%) were significantly more likely to identify the **carer role** as the most challenging aspect.

Appendix A: ABS Geographic Remoteness

The Australian Bureau of Statistics defines remoteness according to the Australian Statistical Geography Standard (ASGS) Remoteness Structure. The ASGS outlines 5 classes of relative geographic remoteness across Australia. These 5 classes are:

- Major Cities of Australia (Melbourne and Geelong)
- Inner Regional Australia (e.g. Bendigo, Shepparton, Ballarat)
- Outer Regional Australia (e.g. Horsham, Lismore, Mildura)
- Remote Australia (e.g. Kenmare, Cann River, Uderbool)
- Very Remote Australia (not applicable to Victoria)

Relative geographic remoteness is measured in an objective way using the Accessibility/Remoteness Index of Australia Plus (ARIA+). ARIA+ is derived by measuring road distance from various populated locations to five categories of service centre, using population as a proxy measure for service availability.

Thank you

We would also like to acknowledge and thank all the participants who were involved in the research for their valuable contribution and input.

This project was conducted in accordance with the international quality standard ISO 20252, the international information security standard ISO 27001, as well as the Australian Privacy Principles contained in the Privacy Act 1988 (Cth).
